

WATER SUPPLY: PUMPING STATIONS

		Paragraph	Page
CHAPTER	1. GENERAL		
	Purpose	1-1	1-1
	Scope	1-2	1-1
	References	1-3	1-1
	Planning Factors	1-4	1-1
CHAPTER	2. DESIGN CONSIDERATION		
	General Design	2-1	2-1
	Demand	2-2	2-1
CHAPTER	3. PUMPING EQUIPMENT		
	Pumps	3-1	3-1
	Pump Drives	3-2	3-1
	Valving	3-3	3-5
	Flow Meters	3-4	3-5
	Piping Layouts	3-5	3-6
	Controls	3-6	3-7
	Reliability Factors	3-7	3-7
CHAPTER	4. HYDRAULICS		
	Headloss and System Curves	4-1	4-1
	Pump Cavitation	4-2	4-3
	Surge Analysis	4-3	4-3
CHAPTER	5. PUMPING STATION LAYOUTS		
	General	5-1	5-1
	Structural Systems	5-2	5-1
	Mechanical Equipment	5-3	5-1
	Electrical	5-4	5-2
	Building Environmental Systems	5-5	5-2
CHAPTER	6. OPERATING EFFICIENCIES		
	General	6-1	6-1
	Pump Operations	6-2	6-1
	Pump Scheduling	6-3	6-1
	Ease of Operation and Maintainability	6-4	6-1
APPENDIX	A. REFERENCES		A-1
	B. AVAILABLE MICRO COMPUTER PROGRAMS		B-1
	C. CASE STUDY FOR ADDING PUMPS TO AN EXISTING SYSTEM		C-1
	D. CASE STUDY FOR HYDRAULIC TRANSIENTS		D-1
BIBLIOGRAPHY			BIBLIOGRAPHY 1

List of Figures

FIGURE	3-1. Booster Pump Stations.	3-2
	3-2. Alternative Pump Applications.	3-3
	3-3. Pump Curves.	3-4
	4-1. System Head Curve.	4-1
	4-2. Two Constant Speed Pumps Operated in Parallel.	4-2
	4-3. Four Constant Speed Pumps of Equal Capacity.	4-3
	4-4. Checklist Surge and Water Hammer Analysis.	4-4
	4-5. Example Water Hammer Potential Calculation.	4-6
	5-1. Pump Station Typical Layout.	5-3
	5-2. Pump Station Sections.	5-4
	C-1. System Network for Hydraulic Analysis.	C-2
	C-2. Existing Distribution System-Maximum Daily Consumption.	C-3
	C-3. Improved Distribution System-Maximum Daily Consumption.	C-4
	D-1. Uncontrolled Surge.	D-1
	D-2. With Air Vessel.	D-2
	D-3. With Pressure Relief Valve.	D-3
